Software Defined Radio: Architectures, Systems and Functions

Markus Dillinger, Kambiz Madani, Nancy Alonistioti

Software Defined Radio: Architectures, Systems and Functions Markus Dillinger, Kambiz Madani, Nancy Alonistioti

Software defined radio (SDR) is a hot topic in the telecommunications field, with regard to wireless technology. It is one of the most important topics of research in the area of mobile and personal communications. SDR is viewed as the enabler of global roaming and a platform for the introduction of new technologies and services into existing live networks. It therefore gives networks a greater flexibility into mobile communications. It bridges the inter-disciplinary gap in the field as SDR covers two areas of development, namely software development and digital signal processing and the internet. It extends well beyond the simple re-configuration of air interface parameters to cover the whole system from the network to service creation and application development. Reconfigurability entails the pervasive use of software reconfiguration, empowering upgrades or patching of any element of the network and of the services and applications running on it. It cuts across the types of bearer radio systems (Paging to cellular, wireless local area network to microwave, terrestrial to satellite, personal communications to broadcasting) enable the integration of many of today's disparate systems in the same hardware platform. Also it cuts across generation (second to third to fourth). This volume complements the already published volumes 1 and 2 of the Wiley Series in Software Radio. The book discusses the requirements for reconfigurability and then introduces network architectures and functions for reconfigurable terminals. Finally it deals with reconfiguration in the network. The book also provides a comprehensive view on reconfigurability in three very active research projects as CAST, MOBIVAS and TRUST/SCOUT.

Key features include:

- Presents new research in wireless communications
- Summarises the results of an extensive research program on software defined radios in Europe
- Provides a comprehensive view on reconfigurability in three very active research projects as CAST (Configurable radio with Advanced Software Technology), MOBIVAS (Downloadable MOBILE Value Added Services through Software Radio and Switching Integrated Platforms), TRUST (Transparently Reconfigurable Ubiquitous Terminal) and SCOUT (Smart User-Centric Communication Environment).

From reader reviews:

Joan Burton:

Do you certainly one of people who can't read satisfying if the sentence chained inside straightway, hold on guys that aren't like that. This Software Defined Radio: Architectures, Systems and Functions book is readable simply by you who hate those perfect word style. You will find the facts here are arrange for enjoyable examining experience without leaving perhaps decrease the knowledge that want to provide to you. The writer involving Software Defined Radio: Architectures, Systems and Functions content conveys thinking easily to understand by a lot of people. The printed and e-book are not different in the information but it just different by means of it. So , do you nonetheless thinking Software Defined Radio: Architectures, Systems and Functions is not loveable to be your top record reading book?

Doris McNeal:

Typically the book Software Defined Radio: Architectures, Systems and Functions will bring that you the new experience of reading any book. The author style to clarify the idea is very unique. In case you try to find new book you just read, this book very acceptable to you. The book Software Defined Radio: Architectures, Systems and Functions is much recommended to you to read. You can also get the e-book from your official web site, so you can more easily to read the book.

Linda Griffin:

A lot of e-book has printed but it differs. You can get it by online on social media. You can choose the most beneficial book for you, science, comic, novel, or whatever simply by searching from it. It is identified as of book Software Defined Radio: Architectures, Systems and Functions. You can include your knowledge by it. Without departing the printed book, it might add your knowledge and make an individual happier to read. It is most crucial that, you must aware about e-book. It can bring you from one destination to other place.

Raymond Jackson:

E-book is one of source of information. We can add our know-how from it. Not only for students but native or citizen want book to know the upgrade information of year in order to year. As we know those publications have many advantages. Beside most of us add our knowledge, may also bring us to around the world. By the book Software Defined Radio: Architectures, Systems and Functions we can take more advantage. Don't someone to be creative people? To become creative person must want to read a book. Just choose the best book that suited with your aim. Don't become doubt to change your life with this book Software Defined Radio: Architectures, Systems and Functions. You can more attractive than now.
