Bio-Inspired Innovation and National Security

Robert Armstrong, Mark Drapeau, Cheryl Loeb, James Valdes

Bio-Inspired Innovation and National Security Robert Armstrong, Mark Drapeau, Cheryl Loeb, James Valdes

Ever since man took to the battlefield, biology has played a significant role—both unintentionally and intentionally—in conflict. Prior to the discovery of the germ theory of disease, most combat deaths were the result of infections. And even before that understanding, biology was used in an offensive role. An early example was the Tatars' hurling of plague victims' bodies over the wall of the Crimean city of Kaffa in 1346, which probably helped spread the Black Death. Despite various treaties and protocols, offensive biological weapons use has continued to this day, with the anthrax attacks of 2001 being the most recent incident. Such activity has led to a strong defensive program, with medical science developing numerous countermeasures that have benefited both civilian and military populations. But that is the “old” biological warfare. Covert programs for the development of novel weapons will advance; likewise, the development of countermeasures will also continue. The present volume, however, does not address these issues. Rather, it reviews and analyzes current research and likely future developments in the life sciences and how they will significantly influence the biological material available to warfighters—not as weapons systems, but as augmentation to currently available equipment. This is the “new” face of biological warfare. The editors of this volume have assembled experts in research, warfighting, and defense policy to describe biological applications from the smallest to the largest scale. In addition, they show how thinking in biological terms can improve our procurement cycle and enhance our development time and costs. Finally, no description of biotechnology would be complete without a consideration of ethical and legal issues related to such research and development. This edited book is an important contribution to the literature and nicely captures a number of ongoing military basic science research projects with long-term implications for the Department of Defense. It does not purport to be an exhaustive accounting, but it is an excellent introduction for policymakers to garner an understanding of where biology is going to fit into 21st-century readiness and preparedness for our fighting force.

From reader reviews:

Lewis Wood:

Often the book Bio-Inspired Innovation and National Security will bring you to definitely the new experience of reading any book. The author style to explain the idea is very unique. If you try to find new book you just read, this book very suitable to you. The book Bio-Inspired Innovation and National Security is much recommended to you to study. You can also get the e-book from your official web site, so you can easier to read the book.

Marilyn Washington:

The book untitled Bio-Inspired Innovation and National Security is the publication that recommended to you you just read. You can see the quality of the publication content that will be shown to you. The language that author use to explained their way of doing something is easily to understand. The author was did a lot of analysis when write the book, and so the information that they share for you is absolutely accurate. You also can get the e-book of Bio-Inspired Innovation and National Security from the publisher to make you far more enjoy free time.

Guadalupe Ramsey:

This Bio-Inspired Innovation and National Security is brand new way for you who has curiosity to look for some information since it relief your hunger details. Getting deeper you upon it getting knowledge more you know or else you who still having tiny amount of digest in reading this Bio-Inspired Innovation and National Security can be the light food in your case because the information inside this particular book is easy to get by means of anyone. These books create itself in the form that is certainly reachable by anyone, yes I mean in the e-book web form. People who think that in reserve form make them feel tired even dizzy this reserve is the answer. So there isn't any in reading a reserve especially this one. You can find what you are looking for. It should be here for an individual. So , don't miss it! Just read this e-book style for your better life and knowledge.

Samuel Potter:

As we know that book is important thing to add our information for everything. By a guide we can know everything you want. A book is a pair of written, printed, illustrated as well as blank sheet. Every year ended up being exactly added. This publication Bio-Inspired Innovation and National Security was filled with regards to science. Spend your spare time to add your knowledge about your scientific disciplines competence. Some people has various feel when they reading any book. If you know how big advantage of a book, you can sense enjoy to read a guide. In the modern era like at this point, many ways to get book that you just wanted.
