Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization Alon Friedman

Statistics for Library and Information Services, written for non-statisticians, provides logical, user-friendly, and step-by-step instructions to make statistics more accessible for students and professionals in the field of Information Science. It emphasizes concepts of statistical theory and data collection methodologies, but also extends to the topics of visualization creation and display, so that the reader will be able to better conduct statistical analysis and communicate his/her findings.

The book is tailored for information science students and professionals. It has specific examples of dataset sets, scripts, design modules, data repositories, homework assignments, and a glossary lexicon that matches the field of Information Science. The textbook provides a visual road map that is customized specifically for Information Science instructors, students, and professionals regarding statistics and visualization.

Each chapter in the book includes full-color illustrations on how to use *R* for the statistical model that particular chapter will cover.

This book is arranged in 17 chapters, which are organized into five main sections:
- the first section introduces research design and data collection;
- the second section discusses basic statistical concepts, including descriptive, bivariate, time series, and regression analyses;
- section 3 covers the subject of visualization creation using Open Source *R*;
- section 4 covers decision making from the analysis; and
- the last section provides examples and references.

Every chapter illustrates how to use Open Source *R* and features two subsections for the major ideas of the chapter: its statistical model and its visual representation. The statistical model captures the main statistical formulas/theories covered in each chapter, while the visual representation addresses the subject of the types of visualization that are produced from the statistical analysis model covered in that particular chapter. The last part of each chapter contains exercises that the student/professional will be able to solve and answer. Each exercise includes fill-in-the-blank and multiple-choice questions.

From reader reviews:

Barbara Stewart:

This Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization is brand new way for you who has attention to look for some information given it relief your hunger info. Getting deeper you into it getting knowledge more you know or you who still having little digest in reading this Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization can be the light food in your case because the information inside this particular book is easy to get simply by anyone. These books build itself in the form that is certainly reachable by anyone, sure I mean in the e-book type. People who think that in reserve form make them feel drowsy even dizzy this publication is the answer. So there is absolutely no in reading a publication especially this one. You can find actually looking for. It should be here for you actually. So , don't miss it! Just read this e-book type for your better life in addition to knowledge.

Marie Daugherty:

You may get this Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization by go to the bookstore or Mall. Just simply viewing or reviewing it could to be your solve challenge if you get difficulties for the knowledge. Kinds of this publication are various. Not only by written or printed but in addition can you enjoy this book simply by e-book. In the modern era just like now, you just looking by your mobile phone and searching what your problem. Right now, choose your personal ways to get more information about your guide. It is most important to arrange yourself to make your knowledge are still up-date. Let's try to choose correct ways for you.

Ann Foley:

A lot of book has printed but it takes a different approach. You can get it by net on social media. You can choose the most beneficial book for you, science, witty, novel, or whatever by simply searching from it. It is known as of book Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization. Contain your knowledge by it. Without departing the printed book, it may add your knowledge and make a person happier to read. It is most essential that, you must aware about guide. It can bring you from one destination to other place.

Michael Robinson:

Reserve is one of source of information. We can add our know-how from it. Not only for students but additionally native or citizen want book to know the update information of year for you to year. As we know those guides have many advantages. Beside most of us add our knowledge, can also bring us to around the world. By book Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization we can have more advantage. Don't you to be creative people? To get

creative person must want to read a book. Just simply choose the best book that suited with your aim. Don't become doubt to change your life with that book Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization. You can more inviting than now.
